HRF025

Report Change Log Evaluation PA

Evaluate changes in master data infotypes specifically and present them neatly. As a prerequisite you will need to activate the logging function of infotypes which is a part of the SAP standard. In addition to and for a better understanding of key values the explaining long texts are shown as well. If desired, you may reduce the number of fields displayed to the desired value to get a much better overview of changed fields.

Solution Description

By using the HR FORCE-Solution "Report Change Log Evaluation PA" you will not only be able to select the desired data you will rather get a brief overview of all changes regarding logged infotypes.

Additionally, fields to be checked may be condensed into so called "Infotype Sets". That means you may define the fields that are important for your company that should be reported. By this means the usually confusing output is reduced to the desired set of information.

Implemented Functionalities

WELL KNOWN SELECTION SCREEN
Data selection using organisational and personal groupings possible

SCALEABLE FIELD VARIANTS
Different field variants for reporting purposes may be defined.

TEXT DESCRIPTION
Value codes (for example Employee Subgroup) will be explained with long text description (only if available).

DELETIONS PLUS ADDINGS ARE RECOGNISED AS A CHANGE.
Deletions and additions with the same key value will be shown as a change.

Client Advantages

Better and target oriented selections

Specific results for many different requirements by using "field variants"

Technical values shown as long text

Clear output of changes

Result presentation via ABAP List Viewer functionality, usage of list variants possible
