## ELDA-Cockpit

Until now, the ELDA software or the ELDA web portal has been necessary for the transmission of ELDA files. This can always be a challenge for your IT. There are also media discontinuities, whereby the transmitted ELDA files are stored on different PCs and can get lost. Simplify the process with the HRFORCE ELDA Cockpit!

### Solution Description

For the first time, it is now possible to transfer ELDA files directly from SAP to ÖGK without any detours via the ELDA software or ELDA-Online. The HRFORCE ELDA Cockpit enables bi-directional data transfer from SAP directly to ÖGK. The data are transmitted in encrypted form. In addition to the transmission, there is also a new interface that offers centralised management including archiving of all files. This means that missing messages are a thing of the past. You can print, save, e-mail or archive messages. All SAP standard applications that support the ELDA process can be called up directly from the cockpit.

### Implemented Functionalities

#### COCKPIT

Own clearly organised application

#### OPEN ELDA RECORDS

Display of the ELDA records still to be processed

#### ELDA OUTPUT

Overview of the files to be sent

#### ELDA INPUT

Structured display of received files by subject area

#### ELDA-ARCHIVE

Storage of the transmitted files with information about user, date

#### VARIOUS FUNCTIONS

Display of transmission logs, notification confirmations, file contents etc. in SAP, local download, e-mail dispatch and archiving possible

### Client Advantages

Transmission and collection of ELDA files directly from SAP

Centralised management of all ELDA files in SAP

Automatic assignment of the retrieved files to the corresponding application folders

No local installation of the ELDA transmission software necessary

Encrypted transmission via SFTP

Logging

Search and filter functions

Splitting of transmission documents
